

SmartSkale Candidate Sourcing System

SUMMARY

The SmartSkale Candidate Sourcing System is a web-based recruitment platform designed to centralize job requisition creation, public job publishing, candidate applications, resume collection, and application management.

PROJECTS

SmartSkale Candidate Sourcing System | Web-based recruitment platform with Public Candidate Portal and Admin/Recruiter Portal.

- Centralize requisition creation, public job posting, candidate self-application, and administrator-side application tracking.
- Public Candidate Portal: browse published jobs, view details, register/login when applying, complete guided application, upload mandatory resume, submit application, and view application status/history.
- Admin/Recruiter Portal: authenticate securely, create/manage requisitions, save drafts, publish/close jobs, view applications, review candidate information/resumes, update application status, and monitor incoming applications.
- Application workflow: Step 1 Bio, Step 2 Education, Step 3 Experience, Step 4 Resume & Submit.
- Implemented constraints include duplicate application prevention using UNIQUE(candidate_id, job_id) and role-based authorization for candidate/admin.

TECHNICAL SKILLS

FastAPI

Python

React

TypeScript

PostgreSQL

JWT

SQLAlchemy

Alembic

REST

JSON

Tailwind CSS

React Router

Axios

React Hook Form

Zod

Pydantic

Passlib

Argon2

bcrypt

SMTP

Git

GitHub

Docker

Docker Compose
pytest

DOCUMENT DETAILS

Project: Candidate Sourcing System; Document Type: Software Requirements Specification; Version: 1.0; Date: 23 August 2026; Based On: SmartSkale Candidate Sourcing System BRD, Version 1.0.

PRIMARY ARCHITECTURE

Frontend: React/TypeScript; Backend: FastAPI/Python; Database: PostgreSQL; Authentication: JWT; ORM: SQLAlchemy; Migration: Alembic; API: REST/JSON.

OUT OF SCOPE (PHASE 1)

AI resume parsing, AI candidate-job matching/scoring, interview scheduling, offer management, onboarding, LinkedIn/Naukri/Indeed integration, background verification, assessment/testing integrations, native Android/iOS applications, multi-language/localization.

KEY ENGINEERING DECISION

Recommendation is to avoid adding AI in Phase 1 and focus on a clean FastAPI + JWT + PostgreSQL implementation that satisfies the required end-to-end journey in two days.
